Token Gathers

Hyperliquid ✓
@HyperliquidX

Thank you to everyone who came to Tuesday's event. For many people, it was their first time in Singapore and first time traveling to any crypto event. Some highlights were the Hypurr NFT gallery, builder booths, Jeff's speech, and merch drop.

We're grateful to have such a passionate community contributing to Hyperliquid. It's inspiring to see many people start out as users, believe in the mission, grow to love the ecosystem, and become builders.

There's still so much to build, and we're excited for the future.

Order Types

Spot	Perpetuals	
• Market	• Market	**Taker** Order
• Limit • Scale • TWAP	• Limit • Scale • Stop Limit • Stop Market • TWAP	**Maker** Order

Try Pitch

Order Types

	Maker	Taker
Pros	• Cheaper Fees • Price certainty upon execution	• Guaranteed execution (instant)
Cons	• Fill is not guaranteed • Partial fill (esp in illiquid markets)	• Higher fees (~2x more exp) • Chance to occur slippage (for larger orders)
Use Case	• Passive Trading • Setting desired entry/exit price • Minimising fees	• Urgent Trades • Closing positions fast • Following market momentum

Understanding Margin & Liquidations

When opening a position, a margin mode is selected:

Cross margin is the default, which allows for maximal capital efficiency by sharing collateral between all other cross margin positions.

Isolated margin is also supported, which allows an asset's collateral to be constrained to that asset.

Try Pitch

Isolated vs Cross

When to use what (?)

Use **Isolated Margin** when:

1. Opening a high risk/leverage trade as it caps your maximum potential loss to a single trade
2. Starting out on your trading journey (beginner) as it force you to define your risk for each trade and prevent mistakes from wiping you out
3. Trading assets that are uncorelated assets

Use **Cross Margin** when:

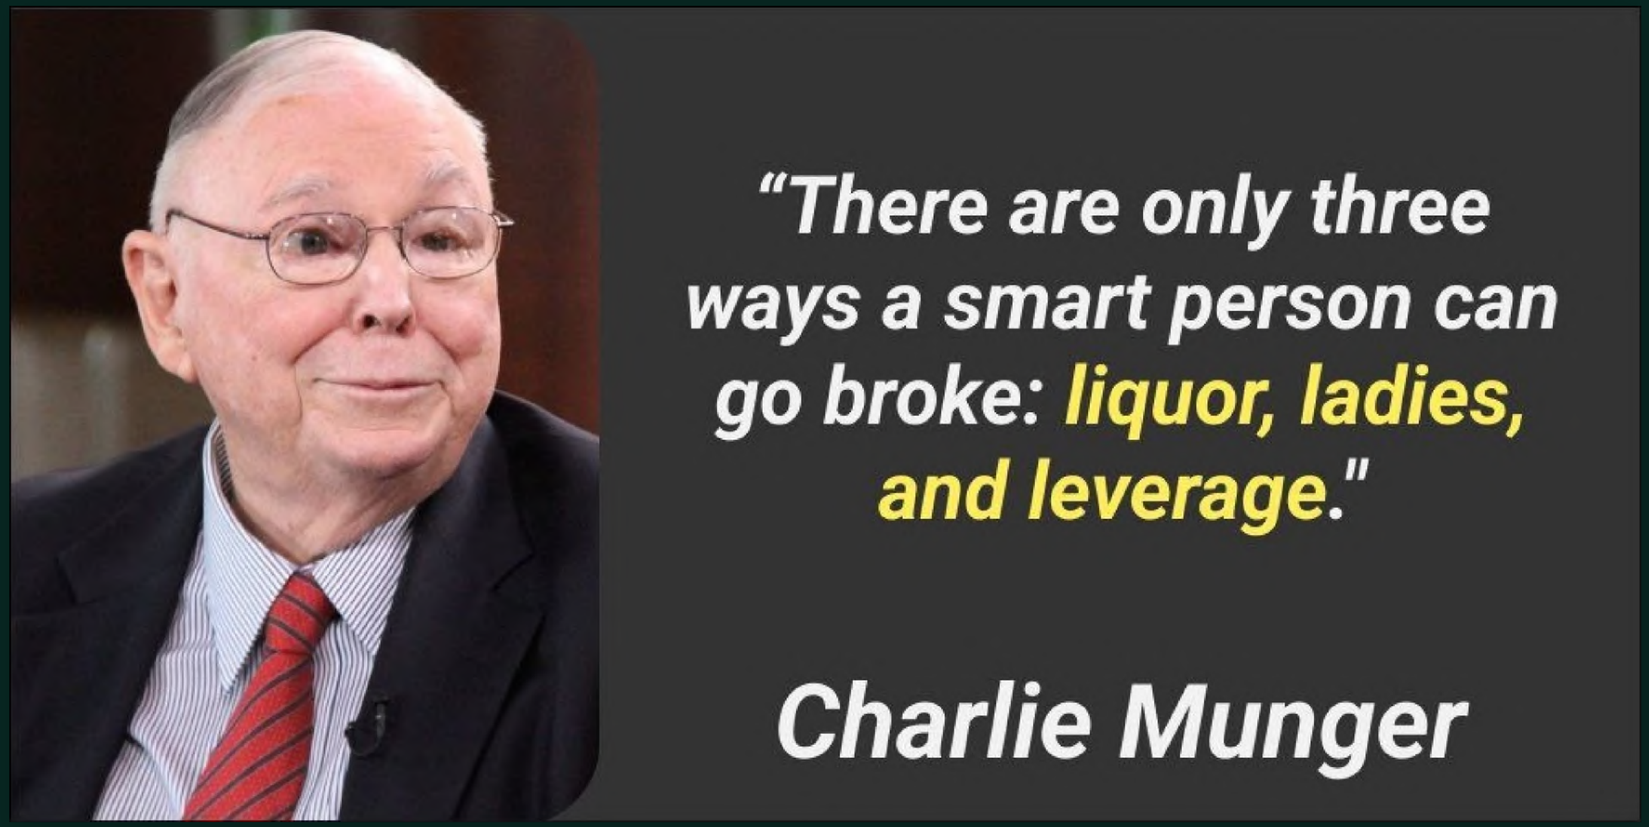

1. Maximise capital efficieny
2. Confident in a long term trade despite short term volatility as it provides a wider liqudation buffer
3. Experienced trader with proper risk management practices in place such as actively monitoring total account health, maintaineance margin ratios, liqudation prices, sub-accounts and set stop-losses (potential life devastating wipeout)

Practical Tips to RM

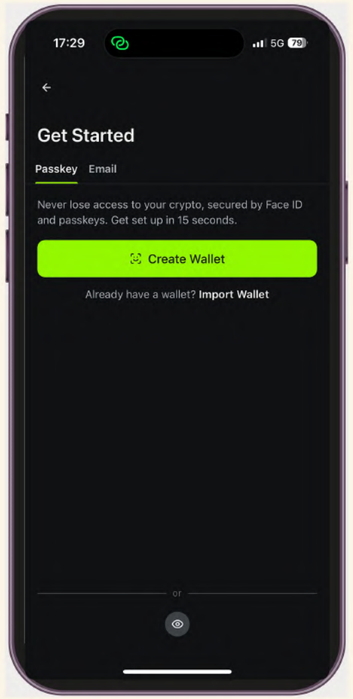

- Leverage is a tool **NOT** a way to get rich quick
- Manage stops actively through TP/SL
- Use orders like trailing stops and conditional buy/sell (Supercexy!) to execute smarter strategies
- Position/Risk sizing - The size to which you're comfortable and can sleep and can hold long term is your size
- Use subaccounts for segregation of funds
- No overtrading and no emotions (fear & greed)
